determining whether or not to grant a certificate of public convenience and necessity for proposed electric transmission lines and associated facilities not constructed in the ordinary course of business, shall not consider land use issues such as the location or alignment of the proposed lines and associated facilities because a local government can address the land use considerations through its land use regulations.

1 *Be it enacted by the General Assembly of the State of Colorado:*

2 **SECTION 1. Legislative declaration.** The general assembly
3 declares that the construction of new electric transmission lines and
4 associated facilities is necessary to promote the development of electric
5 generation resources, Colorado's energy security, and the state's long-term
6 economic growth. Various state and local government processes control
7 the approval, siting, and permitting of electric transmission lines,
8 including the requirement that a public utility obtain a certificate of public
9 convenience and necessity from the public utilities commission for lines
10 and facilities not constructed in the ordinary course of business. To ensure
11 the efficient and timely application of such processes, individual, state,
12 and local interests should be heard and considered in the appropriate
13 forum. It is, therefore, in the state's interest to clarify the proper scope of
14 review by the public utilities commission in connection with applications
15 for certificates of public convenience and necessity for new construction
16 or extension of electric transmission lines and associated facilities.

17 **SECTION 2.** In Colorado Revised Statutes, **amend** 40-5-101 as

1 reasonable.

6 assigning specific territories to one or to each of said utilities, or, by
