energy savings targets and approve plans under which investor-owned electric utilities will promote the use of energy-efficient electric equipment in place of less efficient fossil-fuel-based systems. This directive would substantially follow the model of existing demand-side management (DSM) policies established by the PUC.

Section 1 of the bill declares that DSM has provided substantial economic and environmental benefits, and the PUC's administration of DSM has successfully carried out legislative intent; therefore, the PUC is directed to implement the beneficial electrification programs and plans using the same approach.

Sections 2 and 4 specify the parameters for these programs and plans, including the types of systems and appliances that are eligible for installation, the criteria to be considered when the PUC evaluates plan proposals, the implementation of plans, utility cost-recovery mechanisms, and performance incentives. Section 4 also requires that any installation, upgrade, or new construction under a beneficial electrification program must be performed either by utility employees or by qualified, Colorado-licensed contractors.

Section 3 directs the PUC to apply current standards for measurement of the social cost of carbon emissions, including methane, in evaluating the cost, benefit, or net present value of utility plans and proposals for beneficial electrification.

Section 5 makes a conforming amendment.

1 *Be it enacted by the General Assembly of the State of Colorado:*

2 **SECTION 1. Legislative declaration.** (1) The general assembly
3 finds, determines, and declares that:

4 (a) Colorado is and should remain a national leader in energy
5 infrastructure innovation, creating family-sustaining jobs in the clean
6 energy economy, and environmental stewardship;

7 (b) It is in the public interest and the policy of the state of
8 Colorado to reduce greenhouse gas emissions. For that reason, it is
9 critical that the electric utility sector be evaluated and regulated
10 holistically so that investment can be compared and directed across fuel
11 types to account for cost variance associated with asset procurement and
12 operation as well as the public health and environmental costs of

1 greenhouse gas emissions, energy efficiency, and electric infrastructure
2 reliability accrued over the life cycle of an asset.

3 (c) Legislation adopted in 2007 directed the public utilities
4 commission to establish electricity and natural gas energy savings targets,
5 clarify parameters for cost-benefit analysis, and provide financial
6 incentives to public utilities that meet or exceed specified goals for
7 energy savings. The resulting demand-side management programs, also
8 known as DSM programs, have provided substantial economic and
9 environmental benefits for consumers, businesses, and utilities at modest
10 cost.

11 (d) The public utilities commission's administration of DSM
12 programs has appropriately effectuated legislative intent and has created
13 a precedent for the deployment of programs to support customers using
14 clean electricity to power high-efficiency appliances that provide space
15 and water heating, cooking, and clothes drying in homes and businesses,
16 as well as for certain industrial processes;

17 (e) Technology advancement can further advance cost-effective
18 greenhouse gas emission reductions in the oil and gas, industrial, and
19 building sectors, and electrification of customer end uses can be a
20 pathway to reducing greenhouse gas emissions from these sectors and
21 improving air quality;

22 (f) Fossil gas and petroleum products will contribute to supplying
23 Colorado's energy needs for many years to come; nonetheless,
24 transitioning to clean electric homes and businesses is a critical strategy
25 for improving public health and safety, saving energy, creating
26 family-sustaining jobs, and helping the state meet its greenhouse gas
27 emission-reduction targets;

1 (g) Colorado has significant potential for replacing fossil gas with
2 clean electricity; and

3 (h) Clean heat from appliances such as electric heat pumps, heat
4 pump water heaters, and induction stoves will help Colorado reduce
5 greenhouse gas pollution and has potential to help improve indoor air
6 quality and health and safety in buildings.

7 (2) The general assembly further declares its intent that the public
8 utilities commission approve beneficial electrification plans for the
9 purpose of incentivizing residential, commercial, and industrial utility
10 customers to implement beneficial electrification projects voluntarily,
11 without applying coercion or discriminatory treatment to customers that
12 decline any incentives that may be offered to them.

13 **SECTION 2.** In Colorado Revised Statutes, 38-33.3-106.7,
14 **amend (1)(b)(IV) and (1)(b)(V); and add (1)(b)(VI) as follows:**

15 **38-33.3-106.7. Unreasonable restrictions on energy efficiency**
16 **measures - definitions.** (1) (b) As used in this section, "energy
17 efficiency measure" means a device or structure that reduces the amount
18 of energy derived from fossil fuels that is consumed by a residence or
19 business located on the real property. "Energy efficiency measure" is
20 further limited to include only the following types of devices or
21 structures:

22 (IV) An energy-efficient outdoor lighting device, including
23 without limitation a light fixture containing a coiled or straight
24 fluorescent light bulb, and any solar recharging panel, motion detector, or
25 other equipment connected to the lighting device; and

26 (V) A retractable clothesline; AND

27 (VI) A HEAT PUMP.

22 of the state constitution against this act or an item, section, or part of this
23 act within such period, then the act, item, section, or part will not take
24 effect unless approved by the people at the general election to be held in
25 November 2022 and, in such case, will take effect on the date of the
26 official declaration of the vote thereon by the governor.
