16 the upstream or headward extremity of the stream, as indicated by the
17 solid or dashed, blue or purple line depicting the stream on the most
18 current edition of the seven and one-half (7 1/2) minute topographic

 32 of a waterway is prohibited.
- 33 (H) To prevent the flow of sediment laden water back into the

(a) As used in subsection (b)(1) with respect to a stream, "total length" means the length of the stream, expressed in miles, from the confluence of the stream with the receiving stream to the upstream or headward extremity of the stream, as indicated by the solid or dashed, blue or purple line depicting the stream on the most current edition of the seven and one-half (7 1/2) minute topographic quadrangle map published by the United States Geological Survey, measured along the meanders of the stream as depicted on the map.

(b) This section does not apply to the following:

- (1) A reconstruction or maintenance project (as defined in IC 36-9-27) on a stream or an open regulated drain if the total length of the stream or open drain is not more than ten (10) miles.
- (2) A construction or reconstruction project on a state or county highway bridge in a rural area that crosses a stream having an upstream drainage area of not more than fifty (50) square miles and the relocation of utility lines associated with the construction or reconstruction project if confined to an area not more than one hundred (100) feet from the limits of the highway construction right-of-way.
- (3) The performance of an activity described in subsection (c)(1) or (c)(2) by a surface coal mining operation that is operated under a permit issued under IC 14-34.
- (4) Any other activity that is determined by the commission, according to rules adopted under IC 4-22-2, to pose not more than a minimal threat to floodway areas.

(B) Work must not be within a natural, scenic, or recreational river or stream designated under 312 IAC 7-2.

(C) Except as otherwise provided in Indiana law, free logs or affixed logs that are crossways in the channel must be cut, relocated, and removed from the floodplain. Logs may be maintained in the floodplain if properly anchored or otherwise secured so as to resist flotation or dislodging by the flow of water and placement in an area that is not a wetland. Logs must be removed and secured with a minimum of damage to vegetation.

(D) Isolated or single logs that are embedded, lodged, or rooted in the channel, and that do not span the channel or cause flow problems, must not be removed unless the logs are either of the following:

(i) Associated with or in close proximity to larger obstructions.

(ii) Posing a hazard to **agriculture, business, navigation, or property.**

(H) To prevent the flow of sediment laden water back into the waterway, appropriate sediment control measures must be installed.
