House Concurrent Resolution No. 69

100TH GENERAL ASSEMBLY

INTRODUCED BY REPRESENTATIVE WINDHAM.

4050H.01I

DANA RADEMAN MILLER, Chief Clerk

WHEREAS, during the 1950s and 1960s, as part of a series of Cold War experiments,
the United States Army dusted chosen American cities with a fine powder of a fluorescent,
potentially toxic chemical; and

4

5 WHEREAS, the powder scattering was part of Operation Large Area Coverage (LAC), 6 a series of tests the Army says were designed to assess the threat of biological attacks by 7 simulating the airborne dispersion of germs; and

8

9 **WHEREAS**, the experiments exposed large portions of the United States, and parts of 10 Mexico and Canada, to flurries of a synthesized chemical called zinc cadmium sulfide; and

11

WHEREAS, in 2012, previously classified documents revealed new details about how and where the United States Army sprayed chemical agents over thousands of unwitting residents of some 33 urban and rural areas, including St. Louis, in which populations were deliberately exposed without their knowledge; and

16

WHEREAS, St. Louis was one of the cities singled out for heavy-duty testing during Operation LAC. Testing was conducted throughout the Pruitt-Igoe housing project located northwest of downtown St. Louis, a low-income and predominantly minority community of 10,000 people, with approximately 70% of the community comprised of children under the age of twelve; and

22

WHEREAS, in St. Louis, the United States Army spread zinc cadmium sulfide with motorized blowers perched atop low-income housing buildings and schools, claiming at the time 25 that the machines were part of a test for smoke screens that could guard against aerial 26 observation by the Russians; and

27

WHEREAS, despite the extent of the experiments, local politicians were not notified about the content of the testing. When the true purpose of the machines was revealed by the Army in 1994, a public outcry led to Congress requesting that the National Research Council probe zinc cadmium sulfide's health effects; and

32

WHEREAS, the National Research Council's report concluded that, while the toxicity of zinc cadmium sulfide itself was not well understood, the quantities of the chemical released by the United States Army would not have harmed the public even if the cadmium involved had acted similarly to the purer, more toxic forms of the element; and

37

WHEREAS, the National Academy of Sciences also concluded that zinc cadmium sulfide exposure did not pose a threat to human health, while acknowledging that more toxicity studies should be conducted; and

41

42 **WHEREAS**, in 1994, the New York Times reported that zinc cadmium sulfide was 43 sprayed over an elementary school in Minneapolis, whose former students later reported an 44 unusually high number of stillbirths and birth defects; and

45

WHEREAS, exposure to zinc cadmium sulfide has been linked to devastating side effects, such as lung cancer, prostate cancer, death, developmental defects in children, liver damage, kidney damage, calcium deficiency, osteoporosis, osteomalacia, anemia, loss of sense of smell, reduced sperm count, discoloration of teeth, pulmonary edema, chemical pneumonitis, respiratory failure, emphysema, dyspnea, bronchitis, chronic rhinitis, and decreased birth weights; and

52

53 **WHEREAS**, according to the Army's documents, one of the compounds that was sprayed 54 on the public was called "FP2266", also known as "Radium 226". The now-defunct US Radium HCR 69

3

55 Company came under fire and numerous lawsuits were filed after several of its workers were 56 exposed to dangerous levels of Radium 226 in its fluorescent paint. US Radium Company was 57 found liable for producing a radioactive powdered paint that killed many young women who 58 painted fluorescent watch tiles; and

59

60 WHEREAS, the Army never followed up on the long-term health of the residents 61 exposed to the testing during Operation LAC. In 1972, the government destroyed the Pruitt-Igoe 62 houses; and

63

64 WHEREAS, Operation LAC tests also included the dispersion of biological agents, 65 which were thought not to be harmful at the time but some of the organisms used have since 66 been shown to be potentially pathogenic in people with weakened immune systems; and

67

68 WHEREAS, an explanation and answers from the federal government regarding what 69 occurred and the potential health effects of Operation LAC testing that occurred in the 1950s and 70 1960s are long overdue for the people of St. Louis and all the communities impacted:

71

NOW THEREFORE BE IT RESOLVED that the members of the House of
 Representatives of the One Hundredth General Assembly, Second Regular Session, the Senate
 concurring therein, hereby strongly urge and request that:

(1) The United States Army hold town hall sessions in the St. Louis region to explain
the testing that occurred as a result of Operation Large Area Coverage in the 1950s and 1960s
in St. Louis; and

(2) The United States Environmental Protection Agency and the United States
 Department of Health and Human Services conduct a study to track the health effects on
 populations exposed to Operation Large Area Coverage testing; and

81

82 **BE IT FURTHER RESOLVED** that the Chief Clerk of the Missouri House of 83 Representatives be instructed to prepare properly inscribed copies of this resolution for the 84 Secretary of the Army; United States Secretary of Health and Human Services; Administrator HCR 69

85 of the Environmental Protection Agency; and each member of the Missouri Congressional86 delegation.
