1 **SEC. 2. FINDINGS.**

2 Congress makes the following findings:

3 (1) Women in the United States and around
 4 the world are the linchpin of families and commu-
 5 nities and are often the first to feel the immediate
 6 and adverse effects of social, environmental, and eco-
 7 nomic stresses on their families and communities.

8 (2) The United Nations has recognized, as one
 9 of the central organizing principles for its work, that
 10 “no enduring solution to society’s most threatening
 11 social, economic and political problems can be found
 12 without the full participation, and the full empower-
 13 ment, of the world’s women”.

14 (3) The United Nations Development Pro-
 15 gramme 2013 Human Development Report has
 16 found that the number of people living in extreme
 17 poverty could increase by up to 3,000,000,000 by
 18 2050 unless environmental disasters are averted by
 19 coordinated global action.

1 (4) Climate change is already forcing the most
2 vulnerable communities and populations in devel-
3 oping countries to face unprecedented climate stress,
4 including water scarcity and drought, as well as se-
5 vere weather events and floods, which can lead to re-
6 duced agricultural productivity, food insecurity, and
7 increased disease.

8 (5) Climate change exacerbates issues of scar-
9 city and lack of accessibility to primary natural re-
10 sources, forest resources, and arable land for food
11 production, thereby contributing to increased conflict
12 and instability, as well as the workload and stresses
13 on women farmers, who are estimated to produce 60
14 to 80 percent of the food in most developing coun-
15 tries.

16 (6) Women will disproportionately face harmful
17 impacts from climate change, particularly in poor
18 and developing nations where women regularly as-
19 sume increased responsibility for growing the fam-
20 ily's food and collecting water, fuel, and other re-
21 sources.

22 (7) Epidemics, such as malaria and zika, are
23 expected to worsen and spread due to variations in
24 climate, putting women (especially pregnant mothers
25 and women who hope to become pregnant) and chil-

1 dren without access to prevention and medical serv-
2 ices at risk.

3 (8) The direct and indirect effects of climate
4 change have a disproportionate impact on
5 marginalized women, such as environmental refugees
6 and displaced persons, migrants, religious, racial, or
7 ethnic minorities, adolescent girls, lesbian and trans
8 women, women living in poverty, and women and
9 girls with disabilities and those who are living with
10 HIV.

11 (9) Conflict has a disproportionate impact on
12 the most vulnerable communities and populations,
13 including women, and is fueled in the poorest re-
14 gions of the world by harsher climates, leading to
15 migration, refugee crises, and conflicts over scarce
16 natural resources, including land and water.

17 (10) Displaced, refugee, and stateless women
18 and girls face extreme violence and threats, includ-
19 ing—

20 (A) being forced to exchange sex for food
21 and humanitarian supplies;

22 (B) being at increased risk of rape, sexual
23 exploitation, and abuse; and

1 (C) being at increased risk for HIV, sexu-
2 ally transmitted infections (STIs), unplanned
3 pregnancy, and poor reproductive health.

4 (11) It is predicted that climate change will
5 lead to increasing frequency and intensity of extreme
6 weather conditions, precipitating the occurrence of
7 natural disasters around the globe.

8 (12) The relocation and death of women, and
9 especially mothers, as a result of climate-related dis-
10 asters often has devastating impacts on social sup-
11 port networks, family ties, and the coping capacity
12 of families and communities.

13 (13) The ability of women to adapt to climate
14 change is constrained by a lack of economic free-
15 doms, property and inheritance rights, and access to
16 financial resources, education, family planning and
17 reproductive health, and new tools, equipment, and
18 technology.

19 (14) Despite having a unique capacity and
20 knowledge to promote and provide for adaptation to
21 climate change, women often have insufficient re-
22 sources to undertake such adaptation.

23 (15) Women are shown to have a multiplier ef-
24 fect because women use their income and resources,
25 when given the necessary tools, to increase the well-

1 being of their children and families, and thus play
2 a critical role in reducing food insecurity, poverty,
3 and socioeconomic effects of climate change.

4 (16) Women are often underrepresented in the
5 development and formulation of policy regarding
6 mitigation and adaptation to climate change, even
7 though women are often in the best position to pro-
8 vide and consult on adaptive strategies.
