Part II: Narrative Explanation

II. A - Brief Description Of What The Measure Does That Has Fiscal Impact

Significant provisions of the bill and any related workload or policy assumptions that have revenue or expenditure impact on the responding agency by section number.

Section 1 authorize the Office of Insurance Commissioner (OIC) to share documents with other state agencies as long as the recipients agree to maintain the confidentiality of the documents. The section also exempts from public disclosure:

- documents, materials, or information provided to the OIC by the federal government related to emergency management, hazard mitigation, and the national flood insurance program; and
- data requested by the OIC from regulated property and casualty entities for the purpose of understanding insurance market conditions outside the context of market conduct action. However, the OIC can report on this collected property and casualty data in the aggregate and in a way that does not expose information related to individual companies.

The frequency of these types of records requests is low. Therefore, the OIC assumes that any minor impacts to workload will be absorbed through the normal course of OIC business. No fiscal impact.

II. B - Cash receipts Impact

Cash receipts impact of the legislation on the responding agency with the cash receipts provisions identified by section number and when appropriate, the detail of the revenue sources. Description of the factual basis of the assumptions and the method by which the cash receipts impact is derived. Explanation of how workload assumptions translate into estimates. Distinguished between one time and ongoing functions.

II. C - Expenditures

Agency expenditures necessary to implement this legislation (or savings resulting from this legislation), with the provisions of the legislation that result in the expenditures (or savings) identified by section number. Description of the factual basis of the assumptions and the method by which the expenditure impact is derived. Explanation of how workload assumptions translate into cost estimates. Distinguished between one time and ongoing functions.
